BDI Updates Sequel Office Collection with Enhanced Features and Refreshed Design

➊ Home and office furniture manufacturer BDI has launched Sequel 20 Office. Designed by Matthew Weatherly, this updated collection reinvents the company's award-winning Sequel line, introducing a host of new options, features and design.

Rethought from the ground up, BDI has re-engineered the Sequel collection to include six finish combinations, user-friendly features and new configurations. It will offer more functionality, versatility and appeal to those looking for innovative office furniture design.

For BDI's cornerstone Sequel 20 product — the Sequel 6101 Desk — the desktop surface area has increased from 60 inches to 66 inches, providing ample workspace to accommodate multiple monitors or a collaborative work area. An integrated flip-down power hub allows for placement of a power strip beneath the desk, keeping wires and connections organized and out of sight. The 6101 Desk also has been re-engineered to be simpler to assemble.

For customization, Sequel 20 offers two frame options in satin nickel or black powder-coated steel, which can partner with three available wood finishes, including natural walnut, chocolate stained walnut and charcoal stained ash.

TABLES

Gunlocke Introduces Table Collection with Briefing

➊ Gunlocke has introduced a comprehensive collection of tables designed for conference, collaborative, private office and learning spaces. Briefing allows for a tailored and perfectly coordinated environment by supporting both aesthetic cohesion and a wide variety of individual and group needs with a broad range of choices in application, finishes and styles — all within a single table line. Incorporating consideration of modern task needs and pricing flexibility, the collection now includes expanded table sizes, new top shapes, new and expandable base sizes and shapes and the latest technology options to better support today's workers and workplace productivity.

Briefing further simplifies the specification process for customers by providing a wide selection of coordinating colors, finishes and surface material choices, including solid surface, glass, veneer, laminate, painted wood and metal.

With standard offerings that anticipate most modern needs in working and learning spaces at a variety of price points, these extensive new offerings allow organizations to personalize their environments while maintaining visual consistency across the entire floorplate.
